Please find below and/or attached an Office communication concerning this application or proceeding.

Application No. 09/587,095 Examiner Brandon J Miller -The MAILING DATE of this communication appears on the cover sheet with the correspondence address - Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE Of THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filled after SIX (9) MONTHS from the mailing date of this communication. If the period for reply yeekind above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. If the period or reply yeekind above is less than thirty (30) days and the statutory minimum of thirty (30) days will be considered timely. If the period for reply yeekind above is less than thirty (30) days will be considered timely. Failure to reply weithin the set or extended period for reply well, by statutine, cause the application to become ABANDONED (35 U.S.C, § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any examed patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 3/12/04. 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 1-20 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5) Claim(s) 1-13 is/are rejected. 7) Claim(s) 1-13 is/are rejected to 8. Claim(s) 1-13 is/are rejected to 9. Claim(s) 1-13 is/are rejected to 9. The specification is objected to by the Examiner. Application Papers 9) The proposed drawing correction filed on is accepted or b) objected to by the Examiner. If approved, corrected drawings are required in reply t						
Examiner Brandon J Miller - The MAILING DATE of this communication appears on the cover sheet with the correspondence address → Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filled after SIX (6) MONTHS form the mailing date of this communication. - If the period for reply specified above, the mailman date of this communication. - If the period for reply specified above, the mailman statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than there months after the mailing date of this communication, even if timely filled, may reduce any examed patent term adjustment. See 37 CFR 1.704(b). Status 1) □ Responsive to communication(s) filled on 3/12/04. 2a) □ This action is FINAL. 2b) □ This action is non-final. 3) □ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Art Unit: 2683

DETAILED ACTION

Response

Allowable Subject Matter

Claims 1-10 and 14-20 are allowable.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 1 the combination of Paul and Chalasani (6,037,747) fails to teach a controller that opens a contactor when a voltage of a battery falls below a low voltage disconnect threshold and closes the contactor after the AC source returns as claimed.

Regarding claim 14 the combination of Paul, Chalasani (6,037,747), and Farmer fails to teach a controller that disconnects a battery module using a contactor when a voltage of a battery falls below a low voltage disconnect when rectifier modules fail to provide power.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Paul in view of Chalasani (5,969,436), and Kakalec.

Regarding claim 11 Paul teaches providing power to a load in a telecommunication system that includes a battery subsystem with a plurality of batteries (see col. 6, lines 27-30). Paul teaches a load, and a rectifier that is connected to a load, a battery connection module (see col. 6, lines 27-331, 39-44, & 56-59). Paul does not specifically teach a contactor that connects

Art Unit: 2683

batteries to a load, monitoring voltage that is output by batteries, disconnecting batteries from a load when the voltage output by batteries falls below a low voltage disconnect threshold, or minimizing voltage transients and current surge during reconnection. Chalasani (5,969,436) teaches monitoring voltage that is output by batteries (see col. 3, lines 10-14). Chalasani (5,969,436) teaches disconnecting batteries from a load when the voltage output by batteries falls below a low voltage disconnect threshold (see col. 3, lines 62-67). Kakalec teaches a contactor that connects batteries to a load (see col. 4, lines 5-10). Kakalec teaches minimizing voltage transients and current surge (see col. 1, lines 66-67 and col. 2, lines 1-6 & 20-30). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the invention adapt to include a contactor that connects batteries to a load, monitoring voltage that is output by batteries, disconnecting batteries from a load when the voltage output by batteries falls below a low voltage disconnect threshold, or minimizing voltage transients and current surge during reconnection because this would allow for power saving of an uninterruptible power supply connected to a load apparatus.

Claims 12-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Paul in view of Chalasani (5,969,436), Kakalec and Flaugher.

Regarding claim 12 Paul, Chalasani (5,969,436), and Kakalec teach a device as recited in claim 1 except for gradually lowering the voltage of a rectifier module to a voltage of batteries before reconnecting the batteries to a load. Flaugher teaches a controller that brings a voltage of a rectifier module to a voltage of a battery connection module to a steady state of operation (see abstract col. 3, lines 66-67, and col. 4, lines 6-11 & 50-55). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the invention adapt to include

Art Unit: 2683

gradually lowering the voltage of a rectifier module to a voltage of batteries before reconnecting the batteries to a load because this would allow for the control of auxiliary power sources for distribution of backup power to communication devices.

Regarding claim 13 Chalasani (5,969,436) teaches a float voltage of batteries as they recharge (see col. 3, lines 28-30). Flaugher teaches after closing a contact gradually increasing the voltage of a rectifier to a float voltage of batteries as batteries recharge (see col. 5, lines 9-12 & 20-23).

Applicant's arguments with respect to claims 11-13 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kawabe U.S Patent No. 6,201,371 discloses an uninterruptible power system.

Savage U.S. Patent No. 5,978,237 discloses a power recovery system.

Shannon U.S. Patent No. 6,169,384 discloses a power source system for portable electronic devices.

Got et al. U.S. Patent No. 6,281,602 discloses a backup battery recharge controller for a telecommunications power system.

Daniel et al. U.S. Patent No. 6,278,200 discloses a current management system for a telecommunications power system.

Got et al. U.S. Patent No. 6,650,967 discloses a battery configuration with a click.

Art Unit: 2683

Green et al. U.S. Patent No. 6,204,573 discloses a method and circuit for maintaining charge in a backup battery.

Chen U.S. Patent No. 6,297,972 discloses a backup power stage associated with a dual input power supply and method of operating the same.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brandon J Miller whose telephone number is 703-305-4222. The examiner can normally be reached on Mon.-Fri. 8:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Trost can be reached on 703-308-5318. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
